HOT PRODUCTS - FOUNDATION GOES MOBILE

America's #1 construction accounting software offers remote timecard entry application for handheld devices

Foundation Software, author and developer of FOUNDATION® for Windows® construction accounting software, introduces FOUNDATION mobile, a remote timecard entry application for handheld devices. Contractors can utilize this convenient and cost effective technology to streamline the flow of timecard and job data between the field and the office.

HOW IT WORKS

FOUNDATION mobile is a web-based application for use with FOUNDATION for Windows construction accounting software. It runs through the browser of any handheld device with Internet connectivity. By simply bookmarking the application, users can quickly access FOUNDATION mobile and all of its useful features and functions.

ADVANTAGES OF FOUNDATION MOBILE

Compatible with Common Handheld Devices. FOUNDATION mobile is compatible with common handheld devices, so contractors don't have to purchase a specific device to use the application. Instead, they can log in from devices that they already carry and use regularly such as: smart phones (Droids®, iPhones®, Blackberrys®, etc.), iPads®, Tablets, netbooks, ruggedized laptops, and others.

Streamline Data Flow Between Field and Office Staff. With FOUNDATION mobile, contractors no longer need to manually prepare timecards or remember multiple employee numbers and codes. The system's dropdown fields already contain information like employee names, job codes, etc., making it easy for those in the field to enter, proof, and send employee and job data back to the office.

Offline Capability. One of the most convenient features of FOUNDATION mobile is its offline capability. Users can continue entering data even from the most remote job site locations that are out of their device's service area. The data will save to a temporary database and can easily be synced to the office once users re-enter a service area. This creates a seamless transfer of information and ensures that data is current and up-to-date.

Intuitive Interface. FOUNDATION mobile also features intuitive entry and list screens. The icons are simple to understand and the navigation is user-friendly, creating an easy-to-follow workflow.

Current and Future Applications. The first application to be released on FOUNDATION mobile is a remote timecard and job entry application. Future releases will include applications for service, equipment, and more.
